

A3

- a) providing a document-authoring component which authors a portion of a document which is other than a plain-text [document];
- b) providing a document-encoding component which encodes the document as Internet-compatible email;
- c) linking the document-authoring component with the document-encoding component such that documents generated under said document-authoring component are automatically encoded as Internet-compatible email.

Please add new claim 25 as follows:

AM

- 25. An electronic mail client, comprising:
 - a) a plurality of authoring components, each component for creating a different kind of email message;
 - b) encoding means for automatically encoding email messages created with said authoring components into an Internet-compatible email message; and
 - c) decoding means for automatically decoding said email messages encoded by said encoding means.
